

— PITCH SPEECH · PRESENTATION GUIDE

BMP.tn

The Pitch Speech

Building Tomorrow's Construction, Today.

PRESENTATION FORMAT

5 Speakers · 21 Slides · 15 Minutes

PROJECT

BMP.tn — Digital Marketplace & Management Platform
for the Tunisian Construction Sector

COURSE

PI-CDIO · CCCA4 · Esprit School of Engineering

OVERVIEW

Speech Structure

This guide contains the complete pitch speech for BMP.tn, structured for **5 team members** and timed precisely for a **15-minute presentation**. Each member owns a clear segment of the narrative, with smooth hand-offs and a unified storyline from problem to call-to-action.

#	MEMBER ROLE	SLIDES	DURATION
01	The Opener — Hook & Introduction	1 → 3	2'30
02	The Problem Storyteller	4 → 6	3'00
03	The Solution Architect	7 → 11	3'30
04	The Impact & Vision Lead	12 → 17	3'30
05	The Closer — Innovation & CTA	18 → 21	2'30
TOTAL		21 slides	15'00

tone & energy guide

How Each Member Should Deliver

MEMBER	ENERGY	TONALITY
01 — Opener	High intensity	Confident, captivating, hooks the audience
02 — Problem	Empathetic	Serious, almost grave — make pain felt
03 — Solution	Enthusiastic	Proud, demonstrative, product-confident
04 — Impact	Analytical	Composed, factual, data-driven
05 — Closer	Inspiring	Visionary, energetic, leaves them ready to act

S1

Cover

20 sec

Good morning everyone. Thank you for being here today.

We are team **[Team Name]**, and we're proud to present **BMP.tn** — a digital marketplace and management platform built specifically for the Tunisian construction sector.

In the next 15 minutes, we'll show you how we're transforming an entire industry. Let's begin.

[Pause · Click to next slide]

S2

The Hook

1'00

Let me start with a question that should disturb us all.

What if Tunisia's two-billion-dollar construction industry is still being run on paper, phone calls, and chaos?

Think about that for a moment. While the world is moving toward AI, automation, and digital ecosystems... an entire pillar of our economy is stuck in 1995.

Construction is the second-largest sector in Tunisia. It employs hundreds of thousands of people. It builds our homes, our schools, our hospitals.

And yet — it's the most under-digitized industry we have.

Today, we're going to change that. Let me show you why this problem is bigger than you think.

[Smooth transition to Slide 3]

To understand our solution, we first need to understand the pain — from three different perspectives.

I'll let **[Name of Member 2]** walk you through who is suffering, and why.

[Hand-off to Member 2 · Eye contact + small step back]

02

MEMBER

THE PROBLEM STORYTELLER

SLIDES: 4 → 6 · DURATION: 3'00

Three Problems · Artisan · Expert · Manufacturer

S4

The Artisan's Struggle

1'00

Thank you **[Name of Member 1]**.

Meet our first user: **the artisan**. The mason, the plumber, the electrician — the heart of every chantier in Tunisia.

Today, his daily reality is brutal. He manages every project on paper notebooks. He loses quotes in WhatsApp conversations. He chases clients by phone for payments. He has no way to track multiple chantiers in parallel.

The result? **He loses time, he loses money, and he loses opportunities** — every single week.

And the worst part: he knows there must be a better way, but no tool today is built for HIM.

[Pause for impact · Click]

S5

The Expert's Frustration

1'00

Now meet our second user: **the expert** — the architect, the engineer, the construction consultant.

His job is to specify the right materials, the right products, the right solutions for every project.

But here's the catch: there is no single place in Tunisia where he can discover construction products, compare specifications, and access technical documentation.

He spends hours calling distributors. He digs through outdated catalogs. He requests PDFs by email that arrive three days later.

His expertise is being slowed down by infrastructure that doesn't exist.

[Click]

S6

The Manufacturer's Blind Spot

1'00

And finally — **the manufacturer**. The companies that produce the cement, the tiles, the steel, the paint that builds our country.

Look at this number: **less than 10% of Tunisian construction manufacturers have a digital catalog with live pricing.**

They're selling like it's 1995. Zero analytics on what's actually selling. Cut off from digital channels while global giants like Saint-Gobain and Lafarge scale online and capture market share.

So we have three actors — artisans, experts, manufacturers — all suffering from the same disease: **the absence of a unified digital ecosystem.**

And that's exactly the problem we're solving. **[Name of Member 3]**, the floor is yours.

[Hand-off to Member 3]

THE SOLUTION ARCHITECT

SLIDES: 7 → 11 · DURATION: 3'30

Solution · Ecosystem · 3 Personas

S7

Section Divider — The Solution

10 sec

Thank you [Name of Member 2]. So how do we fix this? Let me introduce you to **BMP.tn**.

[Click]

S8

The Ecosystem

1'00

BMP.tn is **one platform, three profiles, one unified ecosystem**.

We're not building a marketplace. We're not building a project management tool. We're not building a manufacturer dashboard.

We're building all three — and connecting them together.

Our platform is mobile-first, because 80% of our users work on construction sites — not behind a desk. It's built with React, Node.js, and PostgreSQL — and it integrates a local payment gateway for Tunisian dinars.

Now let me show you what each user actually gets.

[Click]

S9

For Artisans

45 sec

For our artisans — **everything fits in their pocket**. This is the real mobile dashboard from our MVP.

They manage every chantier, every quote, every invoice, directly from their phone. They track their subscription, complete their professional profile to build trust, and access the marketplace to source materials in two clicks.

From paper to pocket. From chaos to control.

[Click]

S10

For Experts

45 sec

For our experts — **a full discovery and decision-making platform**. This is the real expert dashboard.

They access an artisan directory to find qualified professionals, manage active projects, communicate directly with manufacturers, and rank top suppliers based on performance.

Decisions go from days to minutes — backed by data, not phone calls.

[Click]

S11

For Manufacturers

50 sec

And for our manufacturers — **a digital storefront with real business intelligence**. This is the manufacturer dashboard from our MVP.

They see total revenue in real time — here, 429 Tunisian dinars from 5 orders. They track average order value, manage active products, and visualize revenue trends over six months.

For the first time, a Tunisian manufacturer can answer the question: **"Who's buying my product, where, and why?"**

Now let me hand it over to **[Name of Member 4]** — to talk about the impact this creates. Over to you.

[Hand-off to Member 4]

04

MEMBER

THE IMPACT & VISION LEAD

SLIDES: 12 → 17 · DURATION: 3'30

Impact · Vision · Benefits

S12

Section Divider — The Impact

10 sec

Thank you **[Name of Member 3]**. Beautiful product is one thing — but what is the real impact? Let me show you the numbers.

[Click]

S13

Impact Metrics

1'10

BMP.tn delivers measurable, transformational impact across the entire ecosystem.

Sixty percent reduction in administrative time for artisans — that's hours every week given back to actually building.

Three times more revenue opportunities for manufacturers — because digital catalogs reach customers their sales team never could.

One hundred percent mobile accessibility — because construction happens on-site, not behind a desk.

And we're not just a Tunisian project. **Our architecture is built to scale across the entire MENA region** — Algeria, Morocco, Egypt — markets representing over 100 billion dollars in construction activity.

[Click]

S14

The Vision

45 sec

Built for Tunisia. Engineered for MENA.

Tunisia is our launchpad — but our vision is regional. The same problems we solve here exist across the entire Arab construction market.

And every month without a solution like BMP.tn means thousands of inefficient transactions, lost revenue, and missed opportunities — across an entire region.

The cost of inaction is bigger than the cost of building.

[Click]

S15

Section Divider — Key Benefits

10 sec

So what does this mean concretely for our users? **Six promises. Six game-changers.**

[Click]

S16

Benefits — Top 3

40 sec

Win more. Keep more. Sell further.

Number one — artisans **win more projects** thanks to a smart quotation system that's three times faster than Word documents.

Number two — they **never lose a chantier again** thanks to real-time mobile project tracking.

Number three — manufacturers **sell beyond borders** with a 24/7 digital catalog accessible across the country.

[Click]

Decide smarter. Trust deeper. Work anywhere.

Data-driven decisions through analytics dashboards. Built-in trust through a secure local payment gateway in Tunisian dinars. And true mobile freedom through our PWA technology — it even works offline on construction sites with poor connectivity.

Now **[Name of Member 5]** will close us out with what makes BMP.tn truly unique.

[Hand-off to Member 5]

05

MEMBER

THE CLOSER

SLIDES: 18 → 21 · DURATION: 2'30

[Innovation](#) · [Roadmap](#) · [CTA](#) · [Thank You](#)

S18

Innovation & Differentiation

50 sec

Thank you [Name of Member 4].

Why is BMP.tn different?

Because it's the **first construction-tech ecosystem built FOR Tunisia, BY Tunisians**. We understand the local market, the local language, the local payment habits, the local regulations.

We're **mobile-first — not mobile-after**. While competitors retrofit their desktop apps for phones, we designed every interaction starting with the construction site.

And we're a **multi-profile unified ecosystem** — not three disconnected tools. The artisan, the expert, the manufacturer all live in the same platform, speaking the same language.

[Click]

S19

Roadmap

40 sec

And we're not just talking — **we're shipping**.

Sprint Zero: project study, requirement analysis, prototyping — done.

Sprint One: design and implementation of V0 — done.

Sprint Three: advanced layer V1, the version you saw today.

Sprint Four: testing and final deployment — coming next.

From study to ship, in four sprints. **We're not building a dream. We're building a product.**

[Click]

S20

Call to Action

45 sec

So let me leave you with this thought.

"We're not just building software. We're rebuilding how Tunisia builds."

The blueprint is ready. The team is ready. The technology is ready. The market is waiting.

We invite you to **try the MVP**, to **partner with us**, and to be part of what comes next.

[Click]

S21

Thank You

15 sec

Thank you.

We'd love to take your questions now.

[Smile · Step forward · Eye contact with the jury · Stay confident]

Critical Tips & Reminders

Smooth Transitions Between Members

Always name the next person before passing the mic — for example: "...Over to you, [Name]." Add a small hand gesture toward your teammate. This creates a polished, team-coordinated effect that signals rehearsal and professionalism to the jury.

Timing Discipline

Keep a discreet timer visible — phone on the lectern, smartwatch glance, or a teammate giving silent signals. **Never read the slide text out loud** — always contextualize, expand, or react to it. If you're 10 seconds behind in your segment, cut the least essential sentence rather than rushing through.

Power Phrases to Memorize Word-for-Word

These six phrases must land perfectly. Memorize them so you can say them with eye contact, not from notes:

SPEAKER	KEY PHRASE
Member 1	"Paper, phone calls, and chaos."
Member 2	"His expertise is being slowed down by infrastructure that doesn't exist."
Member 2	"Less than 10% of Tunisian manufacturers have a digital catalog."
Member 3	"From paper to pocket. From chaos to control."
Member 4	"Built for Tunisia. Engineered for MENA."
Member 5	"We're not just building software. We're rebuilding how Tunisia builds."

Q&A; PREPARATION

5 Anticipated Jury Questions

#	QUESTION & ANSWER
Q1	What's your business model? Subscription-based for artisans (monthly/annual plans) plus a small commission on manufacturer sales. Premium tiers for advanced analytics and lead-generation features.

Q2 Who are your competitors?

There is no unified player in Tunisia today. BatiAdvisor and Bricoman cover only fragments of the value chain. Globally, ManoMano and Procore exist, but neither serves the Tunisian/MENA construction context.

Q3 How will you acquire users?

Strategic partnerships with artisan unions and trade associations, integration deals with materials distributors, and direct outreach through engineering schools (like Esprit) for the expert profile.

Q4 Is your tech stack truly scalable?

Yes — React/Next.js + Node.js + PostgreSQL is cloud-native and horizontally scalable. PWA architecture means zero app-store friction and instant updates. We can scale to MENA without rewriting the platform.

Q5 Why now? Why is this the right moment?

Three converging factors: 95% mobile adoption in Tunisia, the post-COVID digital transformation push across MENA, and the recent availability of robust local payment gateways for Tunisian dinar transactions.

BEFORE YOU GO ON STAGE

The 5-Minute Team Ritual

Five minutes before the presentation: gather your team in a circle. Look each other in the eyes. Together, say out loud the closing vision:

"We're rebuilding how Tunisia builds."

This grounds the team energy, syncs your mindset, and creates the unified confidence the jury will feel from the first second of slide one.

You've got this.

The product is real. The story is strong. The slides are polished. The only thing left is to deliver — with confidence, with rhythm, and with pride.

The blueprint is ready. Let's build.
